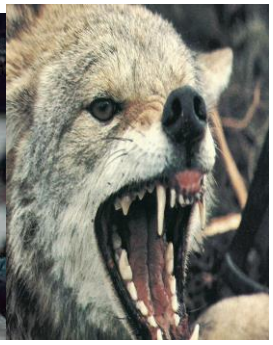
Hooooooooooooooooooooowl, cckwk, eewwhhh...coyotes, squirrels, and pigeons have positive and negative effects. Coyotes move into New York City, squirrels cause power outages, and pigeons save lives.

First, humans and animals can have positive effects on each other when they are together. In source three, pigeons were known to send messages during world war I and II. This is important because their messages saved many soldiers' lives, and they could communicate during the war. Source one state coyotes'' hunt and eat common pests'' which keeps parks clean and safe.

Third, humans and animals can have negative effects on each other. In source two squirrels chewed power lines. For instance, in the state of Kentucky squirrels took out of 10,500 houses of their power. In source three pigeons pooped in big city like New York. In fact, they took out the beauty of cars parks and buildings.

As you can see, coyotes and pigeons have positive and negative effects on humans. Coyotes and pigeons are helpful to people, but squirrels are a problem to many cities.



Commented [HT2]: insert the word **and** before the word pigeons

Commented [CM3R2]: ok

Commented [HT4]: positive and negative effects on???? You are leaving out some words, go look at the prompt

Commented [CM5R4]: ok

Commented [HT6]: missing transition word for body paragraph 1

Commented [CM7R6]: ok

Commented [HT8]: Missing the last sentence of this conclusion paragraph

Commented [CM9R8]: ok
